

Advisory & AI

Turning your data decisions into competitive advantage

Many organisations find they have plenty of data available but struggle to bridge the distance between data insights and prompt action. Decisions move too slowly, accountability is unclear, and the potential of AI sits just out of reach.

At Altis, we work with you to close that gap. Our advisory practice starts with your business priorities: where you're currently making decisions with data, where they are being made without data, and what value can be created for the business.

Our position on AI

We believe AI is not for everything, but it is for everyone. We look at expanding what is possible for your organisation, then focusing on what matters most.

We help you identify where AI could play a role and what business value it will add. Once business value is determined, we define your risk exposure, your operating model, and accountability across the organisation. Semantics and language form a crucial part of the data scope, because understanding what things mean is a prerequisite to trusting your AI.

Why choose Altis?

- **Advisory-led delivery** – understanding your business problem comes first. From there, we help you find opportunities where data & AI can add value.
- **Frameworks built for decisions** – our practice translates directly into action, providing strategies and frameworks you can put into practice immediately.
- **Frameworks built for trust** – we apply a single test before scaling anything. We ask: "If this department or team uses AI, how does it look?" If the answer indicates any lack of governance, we know it's not ready, and we work with you to embed governance as your enabling foundation.
- **We help you figure out where to start** – we identify the teams, domains, and decisions where trust already exists. Trust is where progress starts, regardless of whether the whole organisation is ready.
- **Deep data expertise** – our consultants have built and governed data platforms, supported by decades of experience.

What we deliver

1. **Strategy & discovery** – identify where you stand and your highest-value opportunities, through AI readiness assessments, Data & AI strategy and roadmaps, AI business case development, and more.
2. **AI trust and risk framework** – govern AI from day one to enable safe and effective outcomes, where your people and AI speak the same language, through governance framework design, semantic layer design, and more.
3. **Applied analytics & ML** – turn priority use cases into working solutions with measurable outcomes, through predictive analytics and ML development, solution design, and MLOps advisory.
4. **CDAO advisory support** – ongoing advisory for data and AI leaders navigating organisational complexity, board reporting, and capability uplift.
5. **AI implementation & scaled delivery** – end-to-end build and deployment capability, grounded in your strategy and connected to business outcomes.
6. **Agentic AI** – deploy AI that acts on your behalf, with the right systems and oversight, through readiness assessments, agent use case design, and operationalisation.

What to expect

- A clear understanding of where AI adds value, how your architecture should evolve, and how to build your operating model and team.
- AI capability that delivers value now, not after a multi-year transformation.
- A governance model that earns trust across the organisation.
- Clear accountability for AI decisions and the humans who own them.
- Real choices for leaders about what comes next, based on evidence and momentum.

Let's talk

Altis helps you put the right foundations in place, quickly and confidently, so your AI investment starts delivering value sooner.
